Floating Solar Photovoltaics Webinar – May 28, 2020

Global Solar Council

The voice of the world's solar energy industry, we are a non-profit body based in Washington D.C. representing national, regional and international associations as well as leading solar sector corporations.

Founded at the 2015 Paris climate conference as a **private-sector response to the climate emergency**, we bring together associations from both established and emerging markets that represent companies all along the solar supply chain.

ISES is a Founding Member, and Member of the Board of Directors of the GSC

Our vision - Solar energy is the leading solution to the world's energy needs

Our mission - To promote the rapid adoption of solar energy globally, through market development, partnerships and education.

Partnerships

Our activities

- Developing actionable policy recommendations for intergovernmental organizations
- Opening new markets and growing existing markets
- Building partnerships with key intergovernmental organizations and international institutions
- Expanding local capacity
- Promoting standards, best practices, quality initiatives and sustainability

In recognition of solar PV's immense potential for job creation, the GSC has set a target of 10 million solar jobs by 2030, which will result in trillions of dollars in long-term, stable investments and multiple terawatts of PV generation.
